

The World Health Organisation endorsed SAFE strategy drives the projects we fund

S.A.F.E is the KEY! **S**urgical **A**ntibiotics **F**acial **E**nvironment

We work with affected and at-risk communities to support improved Facial cleanliness and Environmental improvements.

Donations have:

Provided mirrors, an important Tool for self pride and self care, to over 1,300 remote homes;

Funded pilot programs for hygiene in schools, water saving taps and portable washing machines;

Supported the innovation and development of important water infrastructure suitable for remote communities.

The **mobile face washing station** is designed to be used by indigenous children in remote communities as part of Rotary's initiative to eliminate Trachoma from Australia. The face-washing stations are mounted on a trailer that are deployed in Indigenous Communities in Central Australia – particularly for AFL sporting events and other community occasions. Monash University continue to

provide teams of fourth-year engineering undergraduates to work on the project with Rotary (Peter Rogers- peter.h.rogers@monash.edu.au) and corporates such as GHD, Telstra and Yarra Valley Water.
